

ON MORRIS ISLAND.

Night Attack on July 14, 1882.—What happened to the Confederates—Two Prisoners Taken—Total Loss Fourteen.

James H. Rios, in Charleston Weekly News.

This is not intended as a dignified historical sketch, but rather as a cozy "old soldier's talk" with my former companions, to whom minute details, even epistolary garrulity, will have a peculiar interest.

The Union forces had effected a landing on Oyster Point, south end of Morris Island, at daylight of the 10th of July. On the morning of the 11th they began their first assault on the fort. They then continued their operations and building earthworks. Battery Wagner was one of the regular artillery, Capt. Boggs' Battery, the Fifty-first North Carolina, the Twelfth and Eleventh South Carolina, the Twentieth South Carolina, and the Seventh South Carolina. Gen. Taliaferro was in command, and Col. Yates chief of artillery.

THE BULLETS OF THE ENEMY.

On the morning of the 14th, we found the fort nearly skinned by the bombardment. I had been placed in command of the fort, and I had been working details to strengthen the fort. I had been working details to strengthen the fort. I had been working details to strengthen the fort.
